Exercise Worksheet

From the Course:
Understanding Docker Run, Dockerfile, Docker-Compose for Beginners

Install Docker Desktop for Windows Professional or Windows Server
https://docs.docker.com/docker-for-windows/install/

README FIRST for Docker Toolbox and Docker Machine users: Docker Desktop for Windows requires Microsoft Hyper-V to run. The Docker Desktop for Windows installer enables Hyper-V for you, if needed, and restarts your machine. After Hyper-V is enabled, VirtualBox no longer works, but any VirtualBox VM images remain. VirtualBox VMs created with docker-machine (including the default one typically created during Toolbox install) no longer start. These VMs cannot be used side-by-side with Docker Desktop for Windows. However, you can still use docker-machine to manage remote VMs.

If you want to download Docker Desktop without logging into hub.docker.com then you can try to download it from here:

https://download.docker.com/win/stable/Docker%20for%20Windows%20Installer.exe
